

OPEN DATA CUBE

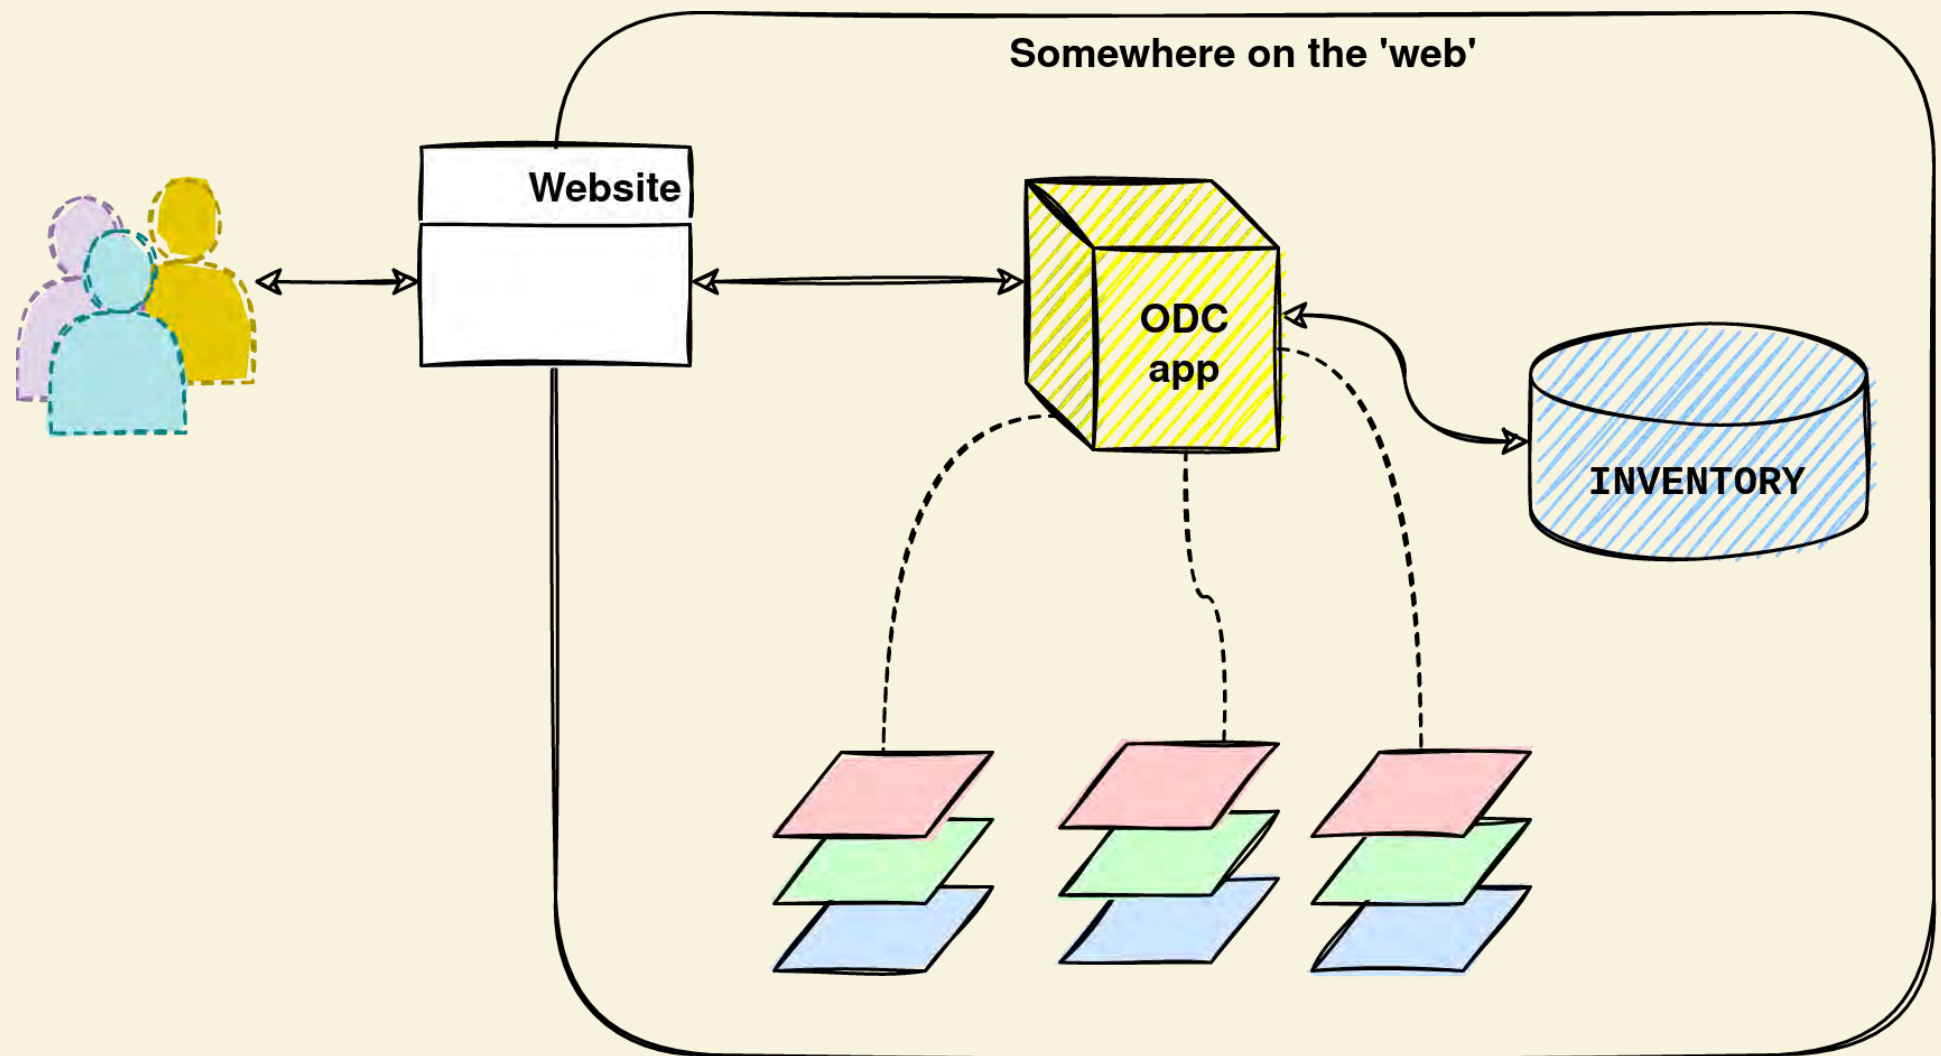

Een aardobservatie engine die je kunt bezitten.

Aron Gergely

WAT IS ODC?

"A Python library that facilitates working with large volumes of raster data"

NOUVEAU: L'interface de la Sandbox est désormais disponible en français. En savoir [plus](#).

NOUVEAU : nous testons l'accès à plus de ressources de calcul ! En plus de l'instance Sandbox standard de 16 Go, vous pouvez désormais utiliser une instance de 32 Go. Veuillez sélectionner la plus petite instance qui convient à votre flux de travail afin que nous puissions allouer les ressources efficacement. Consultez l'article de la base de connaissances pour en savoir plus [ici en EN](#) ou [ici en FR](#). Cet essai se déroulera jusqu'à fin novembre 2021.

En savoir plus sur les données et les produits de Digital Earth Africa en lisant la [documentation](#). Apprenez les ficelles et astuces pour construire votre propre cas d'application en suivant notre [formation](#).

NEW: The Sandbox interface is now available in French. Find out [more](#).

NEW: We are trialling access to more computational resources! In addition to the regular 16 GB Sandbox instance, you can now use a 32 GB instance. Please select the smallest instance that suits your workflow so we can allocate resources efficiently. Check out the Knowledge Base article to find out more [here in EN](#) or [here in FR](#). This trial will run through to the end of Nov 2021.

Learn more about Digital Earth Africa data and products by reading the [documentation](#). Learn tricks and tips to build your own use case by taking our [training](#).

Performing a basic analysis

- Products used: [s2_l2a](#)
- Prerequisites: Users of this notebook should have a basic understanding of:
 - How to run a [Jupyter notebook](#)
 - Inspecting available [DE Africa products and measurements](#)
 - How to [load data from DE Africa](#)
 - How to [plot loaded data](#)

```
**Keywords** : :index:`beginner's guide; analysis`, :index:`analysis; beginner's guide`, :index:`data used; landsat 8`, :index:`band index; NDVI`, :index:`data methods; exporting`
```

Background

To understand the world around us, it's important to combine the key steps of loading, visualising, analysing, and interpreting satellite data. To perform an analysis, we begin with a question and use these steps to reach an answer.

Description

This notebook demonstrates how to conduct a basic analysis with DE Africa data and the Open Data Cube. It will combine many of the steps that have been covered in the other beginner's notebooks.

In this notebook, the analysis question is *"How is the health of vegetation changing over time in a given area?"*

This could be related to a number of broader questions:

- What is the effect of a new land use practice on a field of crops?
- How has a patch of forest changed after a fire?
- How does proximity to water affect vegetation throughout the year?

For this notebook, the analysis question will be kept simple, without much real-world context. For more examples of

Alex Leith
@alexgleith

We're getting good at this. Processing every Landsat 8 scene ever captured over Africa to build cloud free annual mosaics took two hours on a hundred spot instances.

DIGITAL EARTH AUSTRALIA

<https://www.dea.ga.gov.au/>

The screenshot shows the homepage of the Digital Earth Australia website. The browser's address bar displays the URL <https://www.dea.ga.gov.au/>. The page features a dark blue header with the Australian Government Geoscience Australia logo and the Digital Earth AUSTRALIA logo on the left. On the right, a navigation menu includes links for About, Data and products, Learning hub, For developers, and News. The main content area has a large satellite image of Australia on the left and a dark blue background on the right with the heading "Satellite imagery to inform Australia". Below this heading is a button labeled "Get started with our data". A light blue banner below the main content states, "We equip government, industry and communities with free and open satellite imagery and data", with a link to "Learn about us". At the bottom, a white banner reads "See the big picture. Make better decisions." with left and right navigation arrows. A row of small image thumbnails is visible at the very bottom.
